Earth Action

29 Nov 2021

SWOT launched Dec. 16,  
2022 from Vandenberg Space  
Force Base in California

*Source: NASA TV*

PACE launched Feb. 8, 2024  
from Cape Canaveral Space  
Force Station in Florida

*Source: NASA TV*

## SWOT: Sea Surface Height Anomalies

First 21-day cycle of SWOT measurements – first complete global coverage of Earth water elevation, including sea surface height observations

Sea Surface Height Anomaly (SSHA)

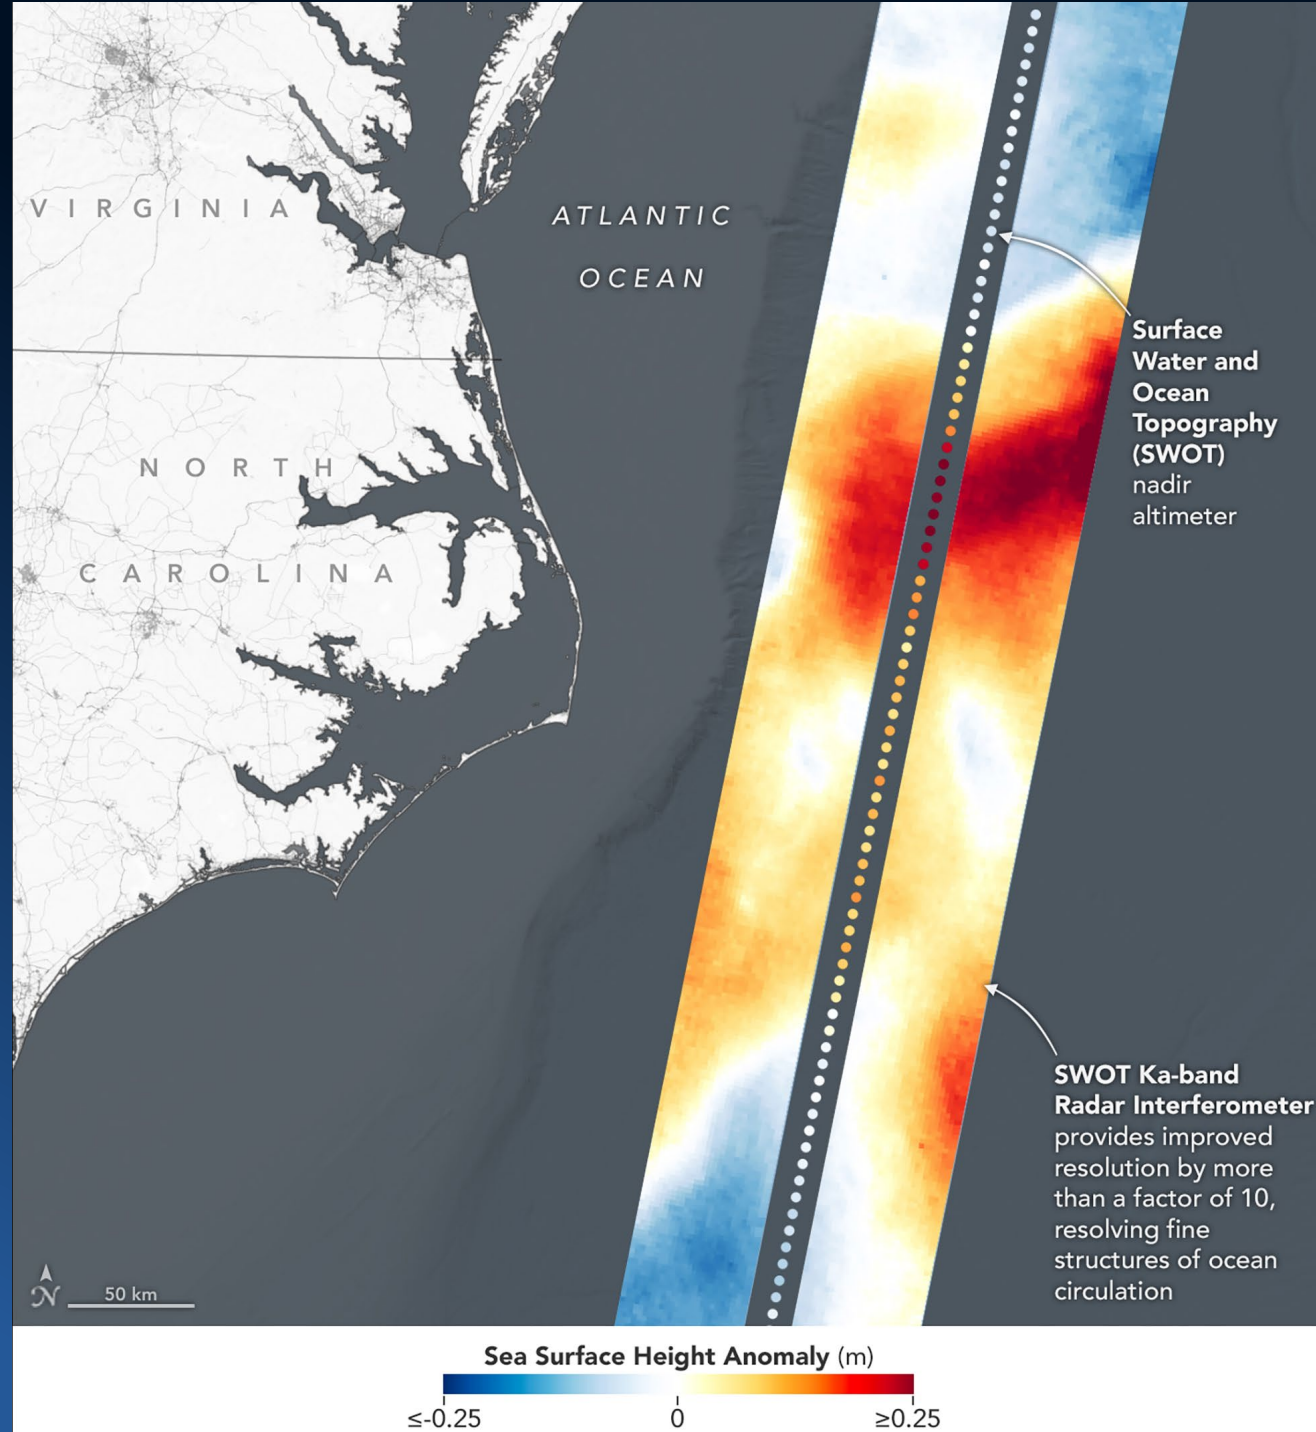

## SWOT: Gulf Stream Sea Surface Height

Red and orange represents sea levels higher than global average. Blue shades are lower than average.

SWOT's spatial resolution is 10 times greater than composite data gathered over the same area by seven other satellites on Jan. 21, 2023

## SWOT Measurements of Ocean Topography & Circulation: Higher Resolution

SWOT objective is to observe ocean topography and 3D ocean circulation >10km versus conventional >200km

Sea level gradients from SWOT

Surface currents from ECCO

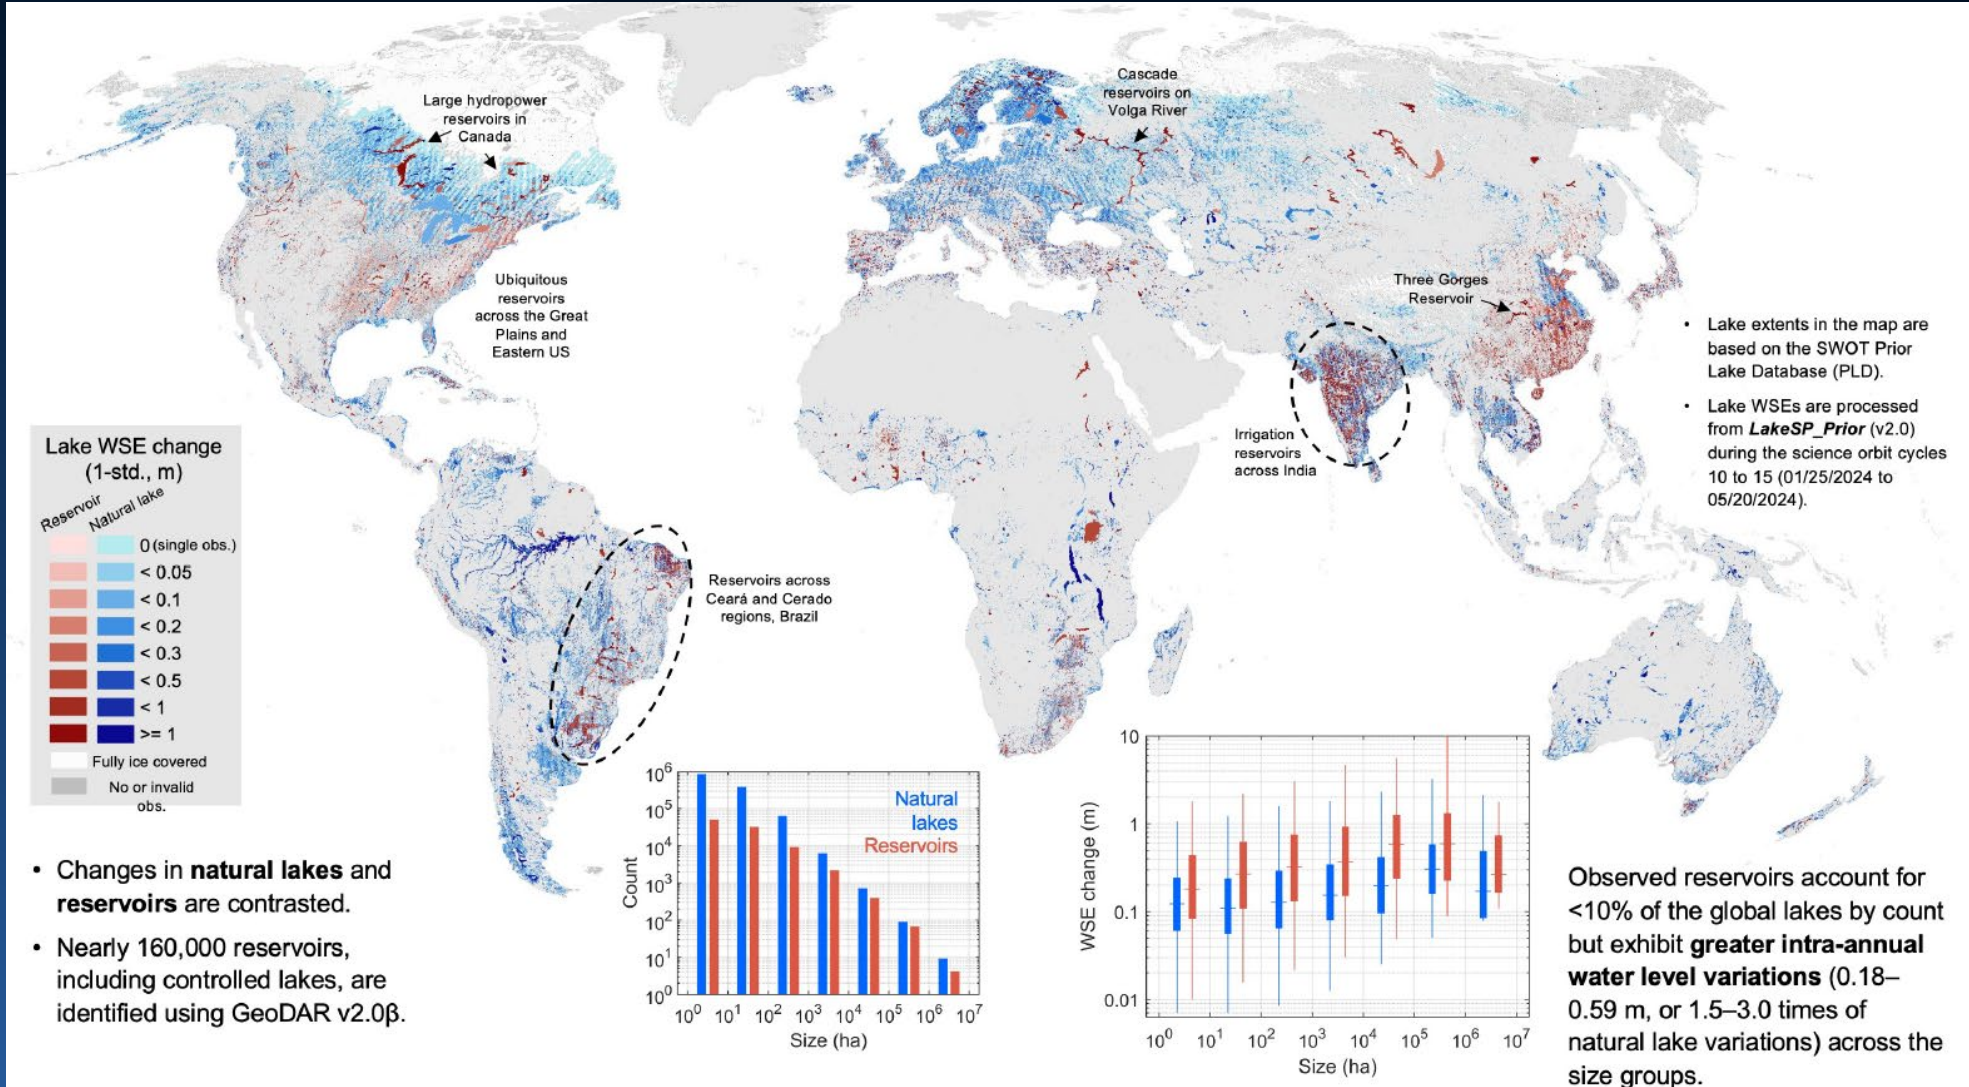

Source: Chris Henze, Nina McCurdy, David Ellsworth

# SWOT Measurements of Inland Water: Water Level Changes

Global lake water level changes from January to May, 2024.

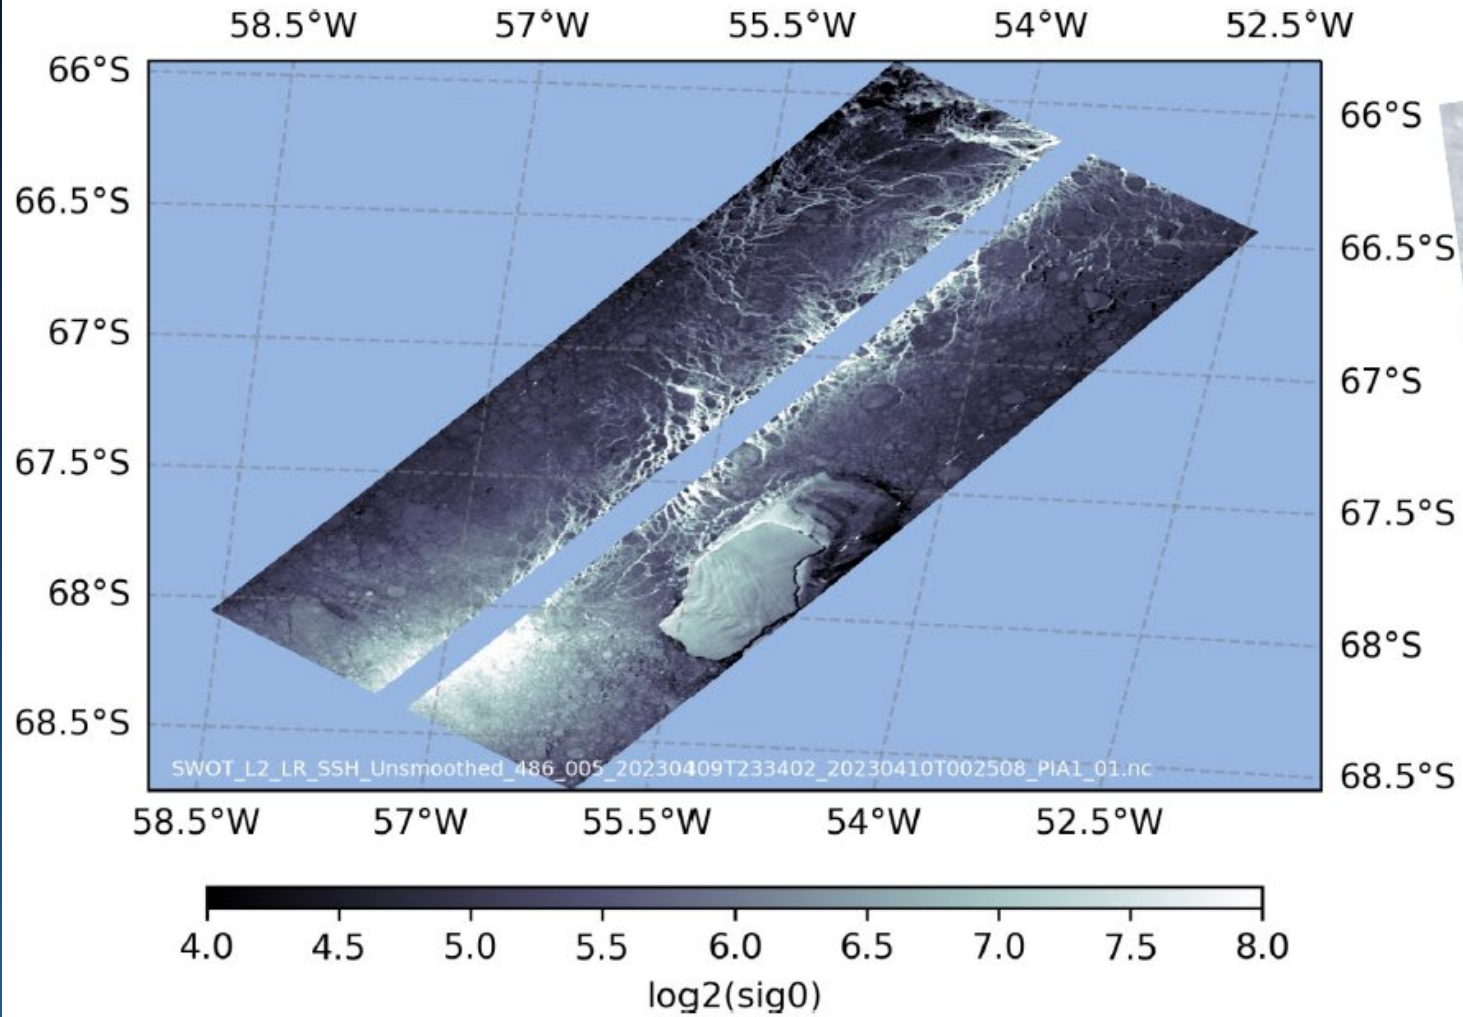

First global, high-resolution view of interior waters (reservoirs, lakes, rivers)

## SWOT: Monitoring of ocean ice

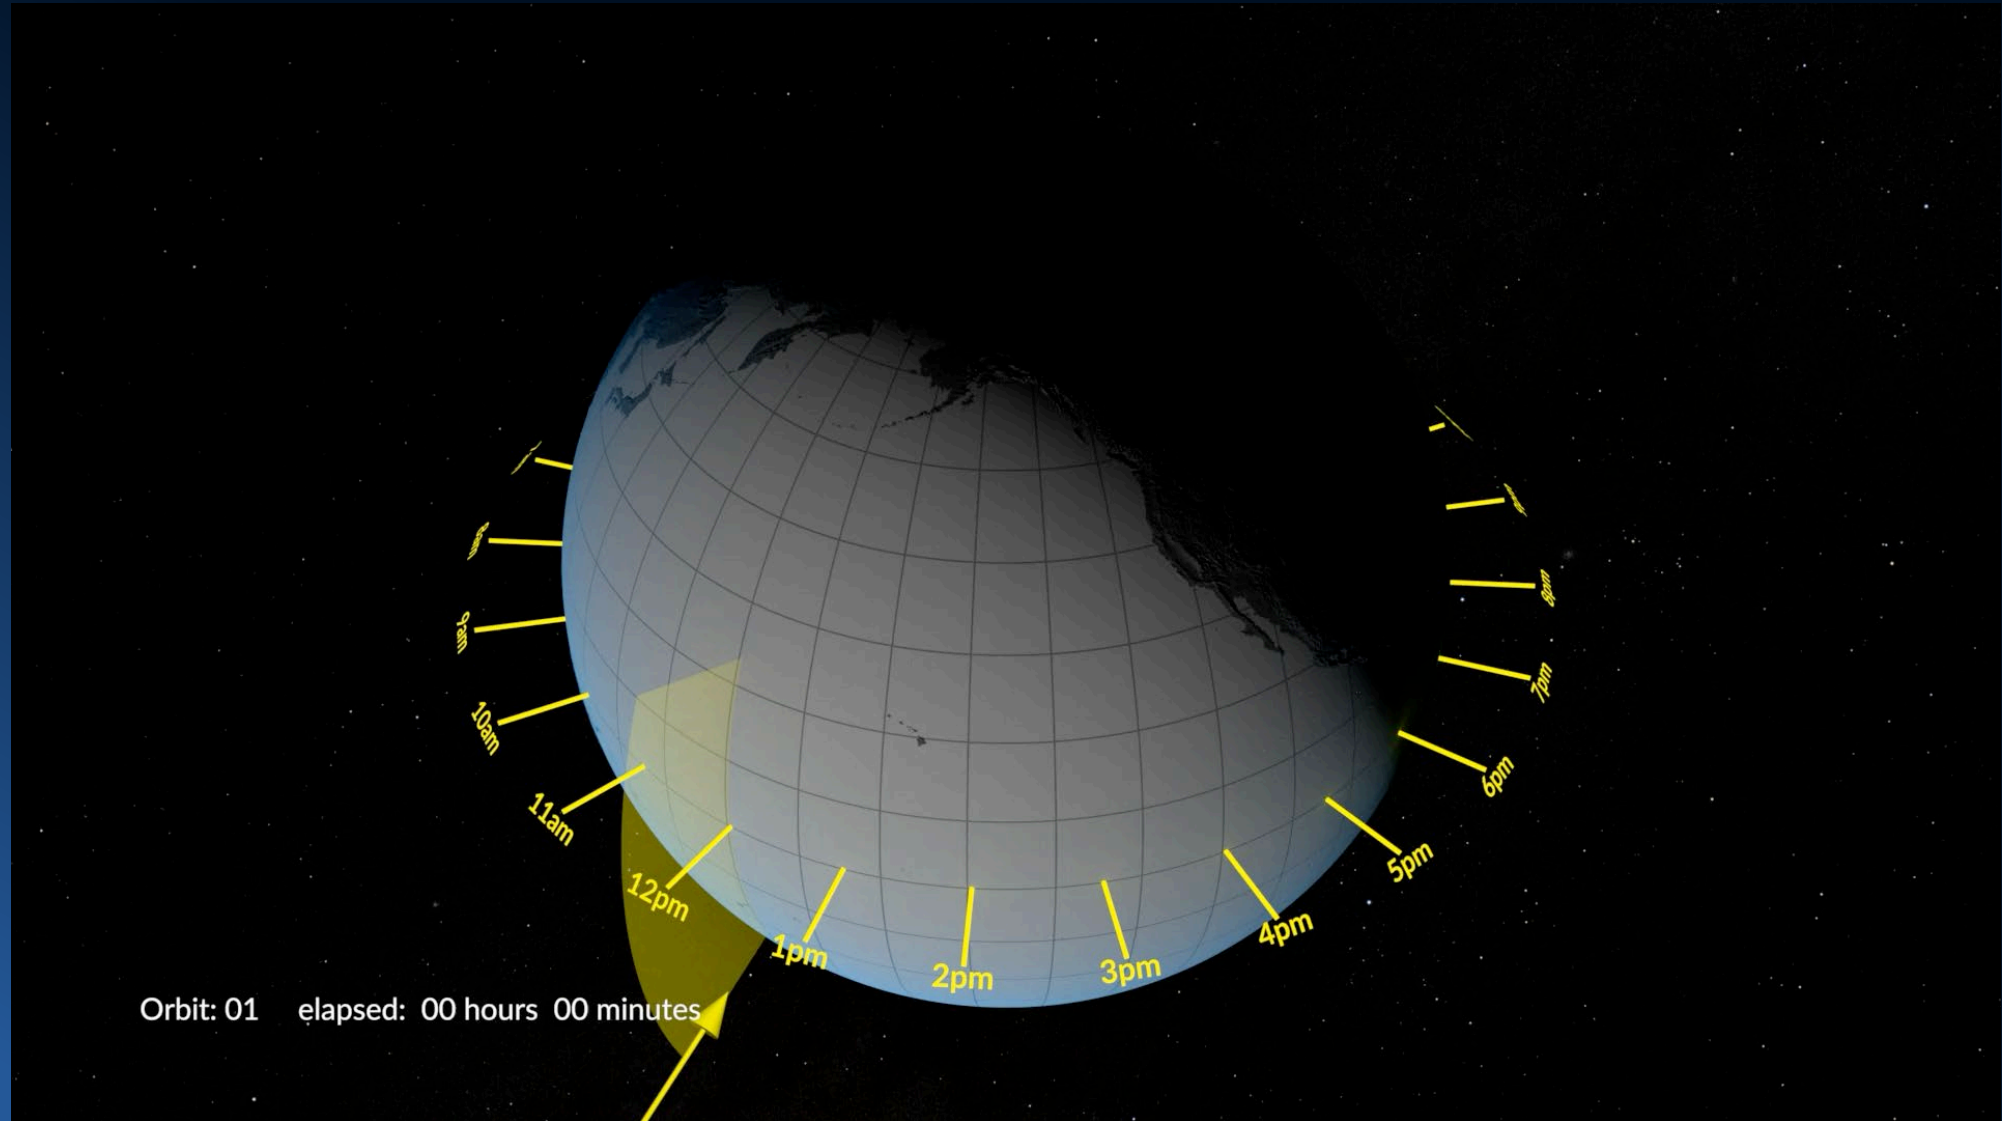

All-weather high  
latitude for  
measurements  
of sea ice and  
km-scales  
icebergs

# PACE Technology: Ocean Color Instrument & Two Polarimeters

Completing orbit  
in 98.3 minutes,  
PACE carries  
OCI, HARP2 and  
SPEXone

## What PACE shows us: Ocean Color

PACE reveals the colors of Earth. The color of the ocean can be used to determine phytoplankton abundances, and with PACE, phytoplankton community composition.

# OCI & VIIRS Rrs(445)

**PACE  
Observations:  
Higher  
Resolution**

OCI agrees with  
VIIRS retrievals  
on global scales –  
but with improved  
spatial resolution.

4-km daily composite from 23 March 2024  
OCI and VIIRS Rrs retrievals agree well on global scales

## PACE Science and Data: Phytoplankton

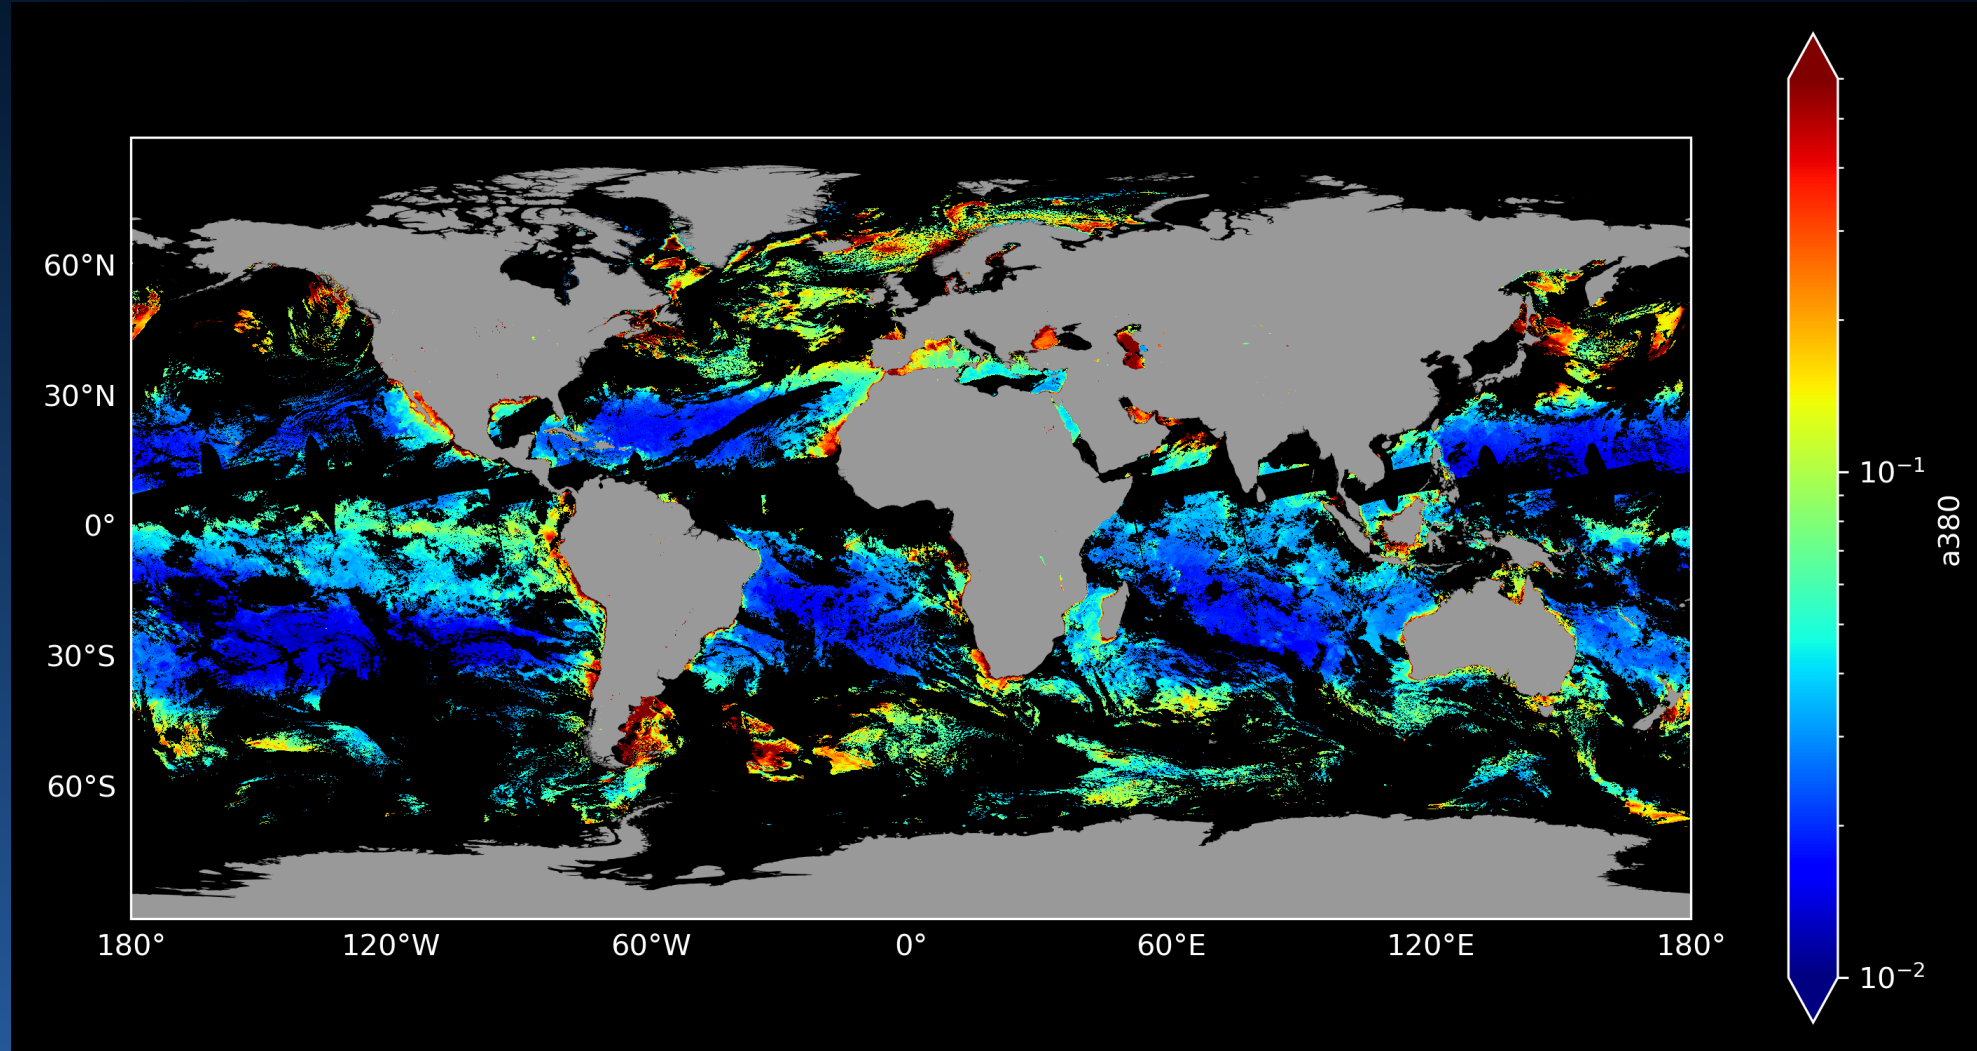

What does it mean,  
what does it tell us

## PACE Science and Data: Phytoplankton & Carbon

PACE offers first use of a UV sensor from space to collect a global view of aquatic dissolved organic matter, critical to the carbon cycle and understanding contribution from the land to the ocean

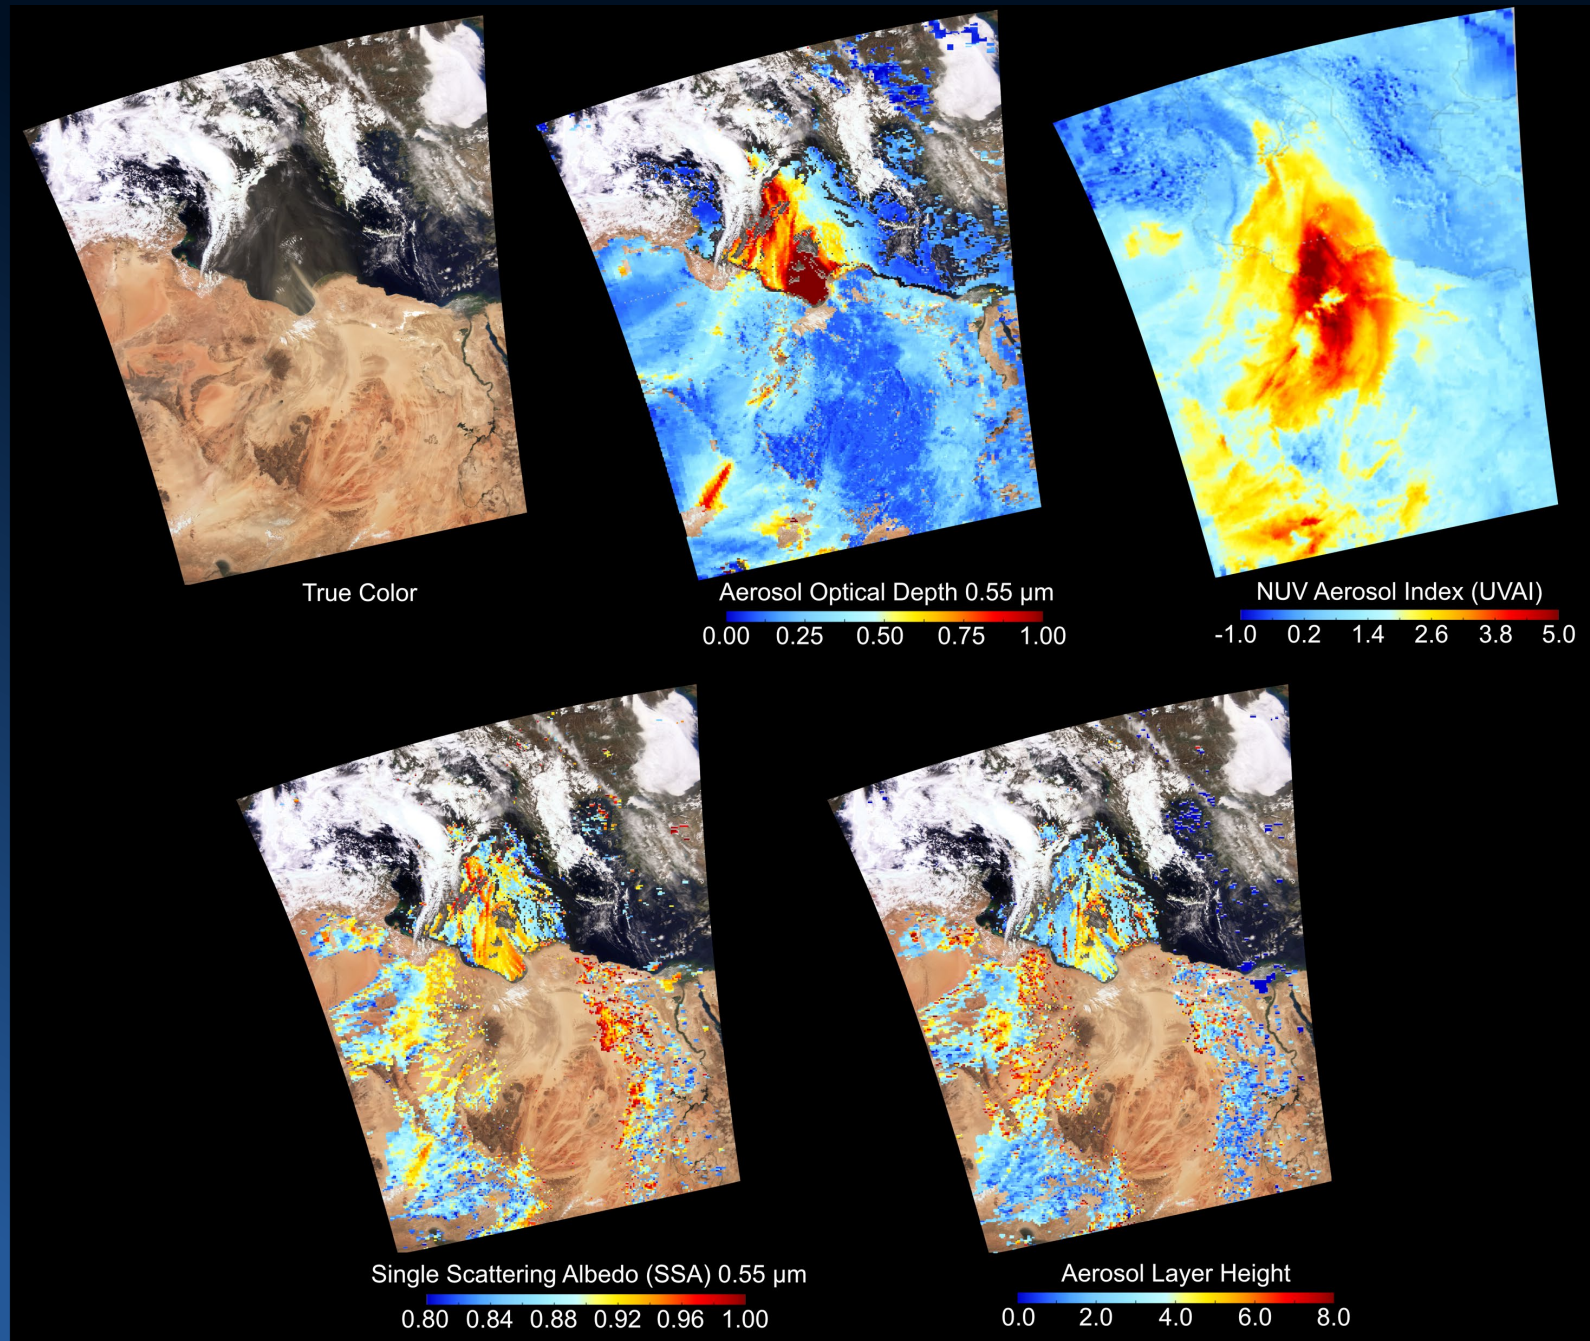

# PACE Science and Data: Aerosols & Role in Climate Change

Preliminary aerosol  
products – still in  
process of  
validation –  
measuring  
differences in  
aerosols

team, UMBC*

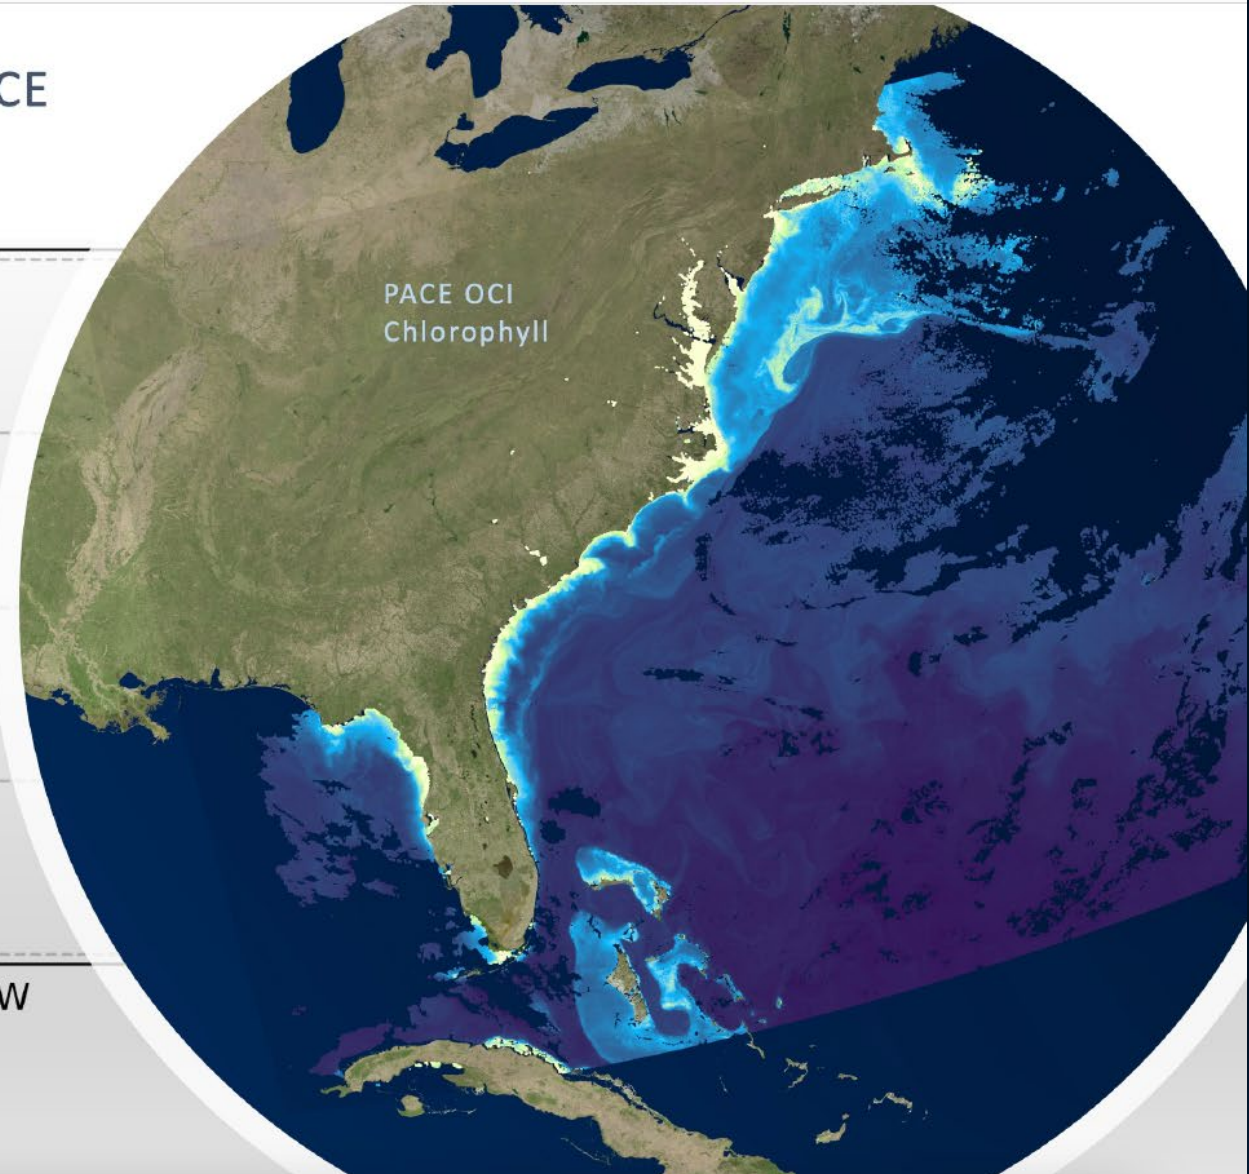

## Integrating SWOT and PACE data

We are  
entering a  
“Golden Age  
of Ocean  
Science”

# Earth Science to Action Strategy

Earth Science to Action

## Virtuous Cycle

- User needs inform next iteration of programs, missions and initiatives

## Public Understanding & Exchange

- Put more scientific understanding into public sphere
- Deliver applied science to users
- Participate in multi-way info exchange
- Use input to inform subsequent work

## Solutions & Societal Value

- Offer models, scientific findings and info through Open-Source Science principles
- Support climate services
- Provide science applications and tools to inform decisions

## Earth System Science & Applied Research

- Grow scientific understanding of Earth's systems
- Develop predictive modeling for science applications and tools to mitigate, adapt and respond to climate change

## Foundational Knowledge, Technology, Missions & Data

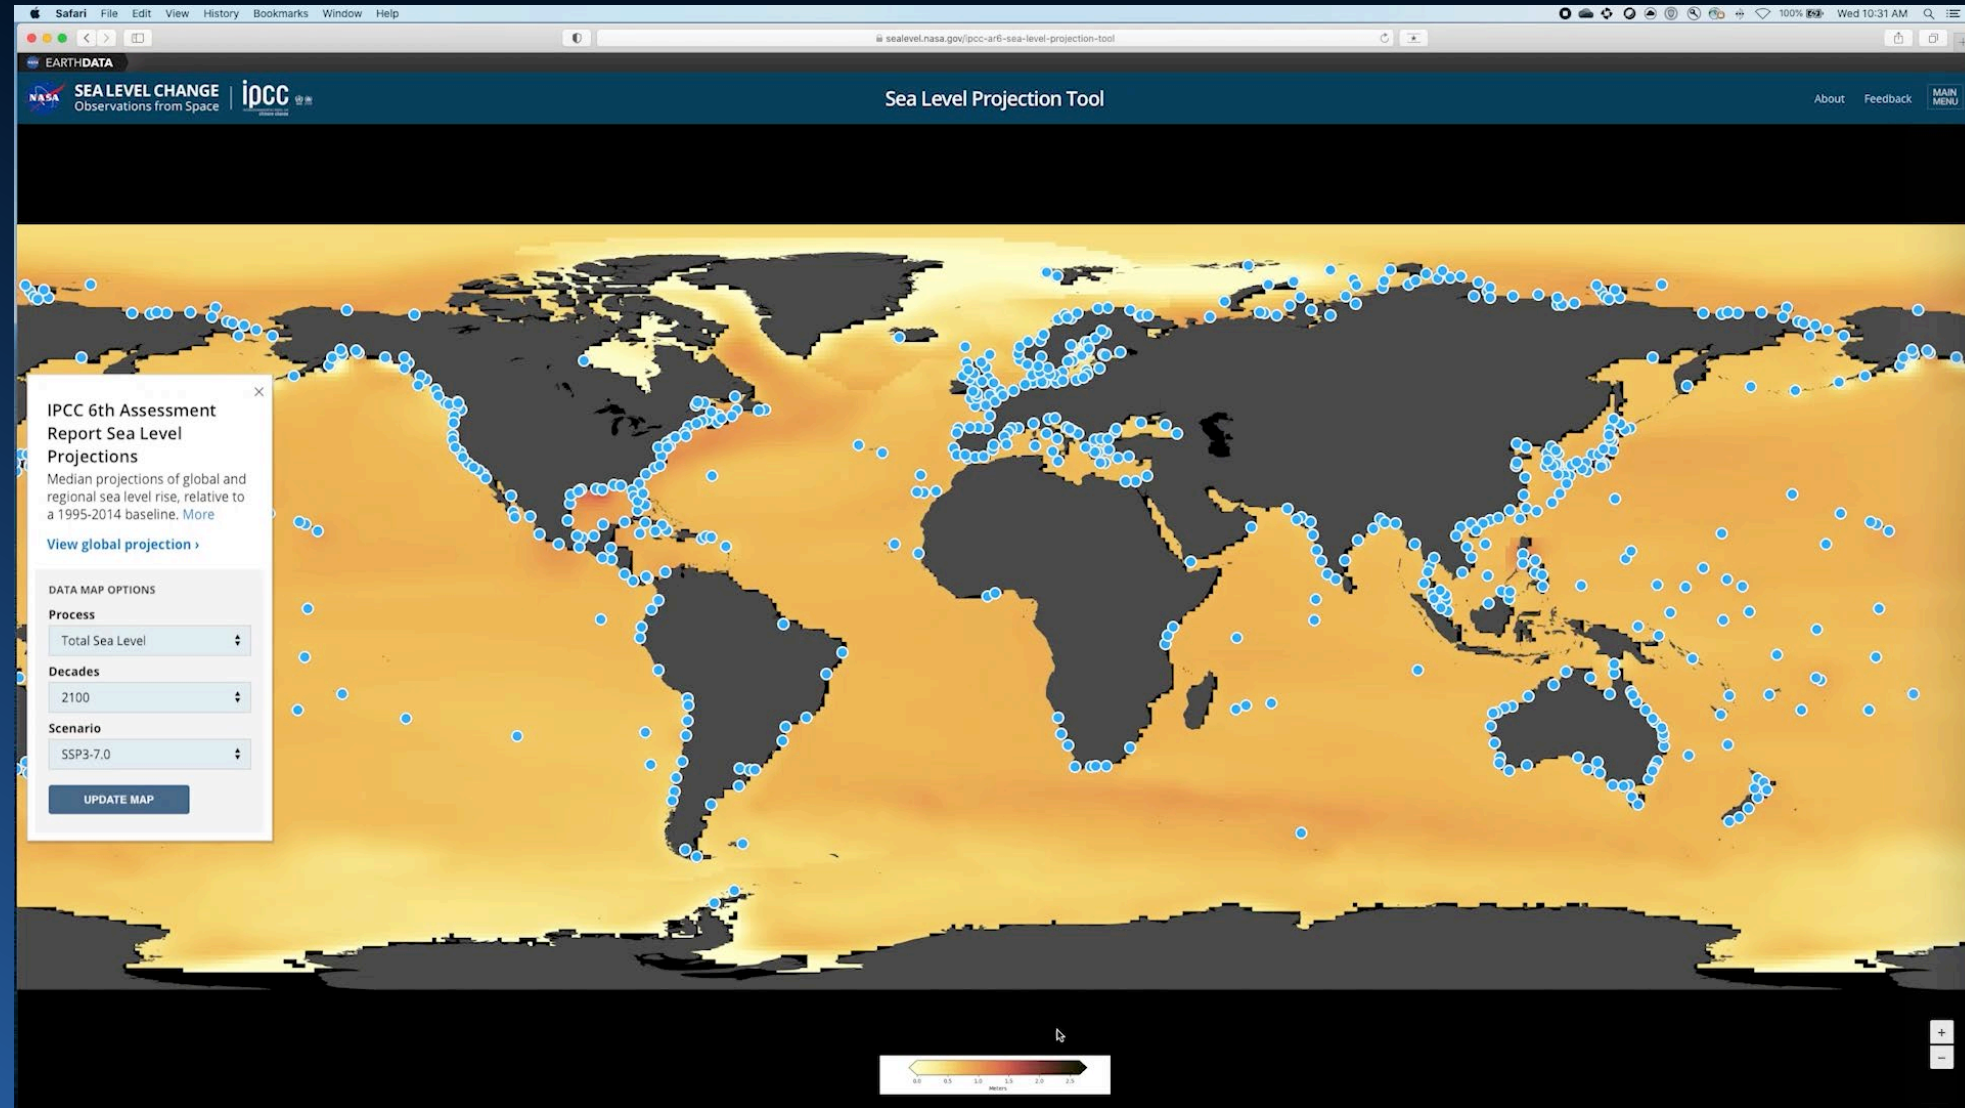

- Technology innovation
- Earth observations missions
- Data collected from space, air and ground

# NASA Informs Actionable Climate Decision Making: Sea Level Rise

NASA data and knowledge are open and free, enabling informed decision-making

Example: planning for sea level rise on 10-100 year horizons at your coastal city

<https://sealevel.nasa.gov> (also at UNFCCC)

**Upcoming  
Missions:  
NISAR**

NASA-ISRO  
Synthetic  
Aperture Radar
