# UAF Clean Catalog

## How to provide feedback to data providers?

- Remember the “Building on Success” theme
  - ncISO metadata assessment tool is very successful

Catalog Services - Mozilla Firefox

ferret.pmel.noaa.gov/geoide/CleanCatalogs/oos.soest.hawaii.edu/thredds/idd/ocn\_mod.html?dataset=scud\_pac

Catalog Services

- ID: scud\_pac

**Documentation:**

- **summary:** The SCUD data product is an estimate of upper-ocean velocities computed from a diagnostic model (Surface CUrrents from a Diagnostic model). This model makes daily estimates of ocean currents by combining geostrophic and Ekman currents. The estimate is computed through derived coefficients such that the results best match ocean drifting buoys. The currents therefore are a best-estimate of currents at 15 meters (drifting buoys are drogued at 15 meters). The dataset is intended to diagnose trajectories of a tracer floating near the surface such as marine debris, oil spills, etc. The data are provided on a 1/4-degree grid for the Pacific.
- **rights:** These model data were generated as part of an academic research project, and the principal investigator, Nikolai Maximenko (maximenk@hawaii.edu), asks to be informed of intent for scientific use and appropriate acknowledgment given in any publications arising therefrom. The data are provided free of charge, without warranty of any kind.
- **funding:** The Pacific Islands Ocean Observing System (PacIOOS) is funded through the National Oceanic and Atmospheric Administration (NOAA) as a Regional Association within the U.S. Integrated Ocean Observing System (IOOS). PacIOOS is coordinated by the University of Hawaii School of Ocean and Earth Science and Technology (SOEST).

**Access:**

## Text Search Score: 6/7

Text searches are a very important mechanism for data discovery. This group includes attributes that contain descriptive text that could be the target of these searches. Some of these attributes, for example title and summary, might also be displayed in the results of text searches.

Score	Attribute	Description	THREDDS	ISO 19115-2
1	<a href="#">title</a>	A short description of the dataset.	dataset@name	/gmi:MI_Metadata/gmd:identificationInfo/gmd:MD_DataIdentification/gmd:citation/gmd:CI_Citation/gmd:title/gco:CharacterString
1	<a href="#">summary</a>	A paragraph describing the dataset.	metadata/documentation[@type="summary"]	/gmi:MI_Metadata/gmd:identificationInfo/gmd:MD_DataIdentification/gmd:abstract/gco:CharacterString
1	<a href="#">keywords</a>	A comma separated list of key words and phrases.	metadata/keyword	/gmi:MI_Metadata/gmd:identificationInfo/gmd:MD_DataIdentification/gmd:descriptiveKeywords/gmd:MD_Keywords/gmd:keyword/gco:CharacterString
1	<a href="#">keywords_vocabulary</a>	If you are following a guideline for the words/phrases in your "keywords" attribute, put the name of that guideline here.	metadata/keyword@vocabulary	/gmi:MI_Metadata/gmd:identificationInfo/gmd:MD_DataIdentification/gmd:descriptiveKeywords/gmd:MD_Keywords/gmd:thesaurusName/gmd:CI_Citation/gmd:title/gco:CharacterString
1	<a href="#">standard_name_vocabulary</a>	The name of the controlled vocabulary from which variable standard names are taken.	metadata/variables@vocabulary	/gmi:MI_Metadata/gmd:identificationInfo/gmd:MD_DataIdentification/gmd:descriptiveKeywords/gmd:MD_Keywords/gmd:thesaurusName/gmd:CI_Citation/gmd:title/gco:CharacterString
0	<a href="#">history</a>	Provides an audit trail for modifications to the original data.		/gmi:MI_Metadata/gmd:dataQualityInfo/gmd:DQ_DataQuality/gmd:lineage/gmd:LI_Lineage/gmd:statement/gco:CharacterString
1	<a href="#">comment</a>	Miscellaneous information about the data.	metadata/documentation	/gmi:MI_Metadata/gmd:identificationInfo/gmd:MD_DataIdentification/gmd:supplementalInformation

# How to provide feedback to data providers?

- Remember the “Building on Success” theme
  - ncISO metadata assessment tool is very successful

## How about a catalog quality assessment tool?

## Documentation:

- **summary:** The below is a link to a web page which will display statistics about the quality of the TDS catalog. The quality metrics are "% of datasets that are valid", "% of qualified datasets that are aggregated", and "% of available services". Datasets/Data are considered "valid" if they conform to the netcdf/Java Common Data Model, and if they are compliant with the Climate and Forecast Metadata conventions. The TDS access services required are: OPeNDAP, WCS, WMS and the NcISO services of UDDC, NCML, ISO.

Data issues

# The catalog cleaner can...

1. Crawl a collection of catalogs and find all of the OPeNDAP end points.
2. Examine each end point and determine if it has gridded CF compliant netCDF data.

# The catalog cleaner can...

1. Report problems:
  - a. No grids found that follow CF
  - b. Unordered time axis
  - c. Data access errors (underlying files missing, mis-configured gateways, etc.)
2. Detect unaggregated **time series** data
3. Detect missing services

# The catalog cleaner can...

1. Write a new catalog with remote links to the data and with local versions of missing services.

# The catalog cleaner can...

but shouldn't...

1. Construct an aggregation to run locally accessing remote data via OPeNDAP.

# Why not...

1. Unacceptably poor data access performance.
2. No access to the local file system, so it cannot make a catalog that would aggregate the files via configuration pointing to the local file system.

# What to do...

1. Use a modified version of the tool to assess the quality of a local catalog.  
IE: CatalogCleaner → CatalogEvaluator
2. Do the (not difficult) work locally to aggregate files where appropriate and turn on missing services.

# Moving Forward....

- Welcome feedback on rubric and Catalog Cleaner tool
- Evolution of tool to an evaluation tool
- UAF master catalog to go beyond gridded files
  - Use ERDDAP to including In Situ featureTypes
  - Building support for visualization of these in LAS
- Continue community outreach to improve catalogs

# Thank you!
