

# U.S. IOOS Requirements Process Briefing for IOOS AC Requirements PWG

Carl Gouldman | Director | August 6, 2020

# Overview

- **Foundational Documents and Requirements:** Where IOOS Requirements came from originally and how did we analyze those?
- **Present:** How are IOOS Requirements identified and managed today?
- **Guiding Principles:** As IOOS continues to grow and mature, what principles are important to retain for requirements management?

# Foundational IOOS Documents

# Foundation: Original IOOS Requirements

- Sources:
  - 2002 Airlie House Report
  - 2005 DMAC Implementation Plan
  - 2006 First U.S. IOOS Development Plan
  - 2009: ICOOS Act
  - 2010: U.S. IOOS Blueprint for Full Capability v1.0
  - 2010: Data Integration Framework
  - 2012 U.S. IOOS Summit Report
- Requirements focused on building the system

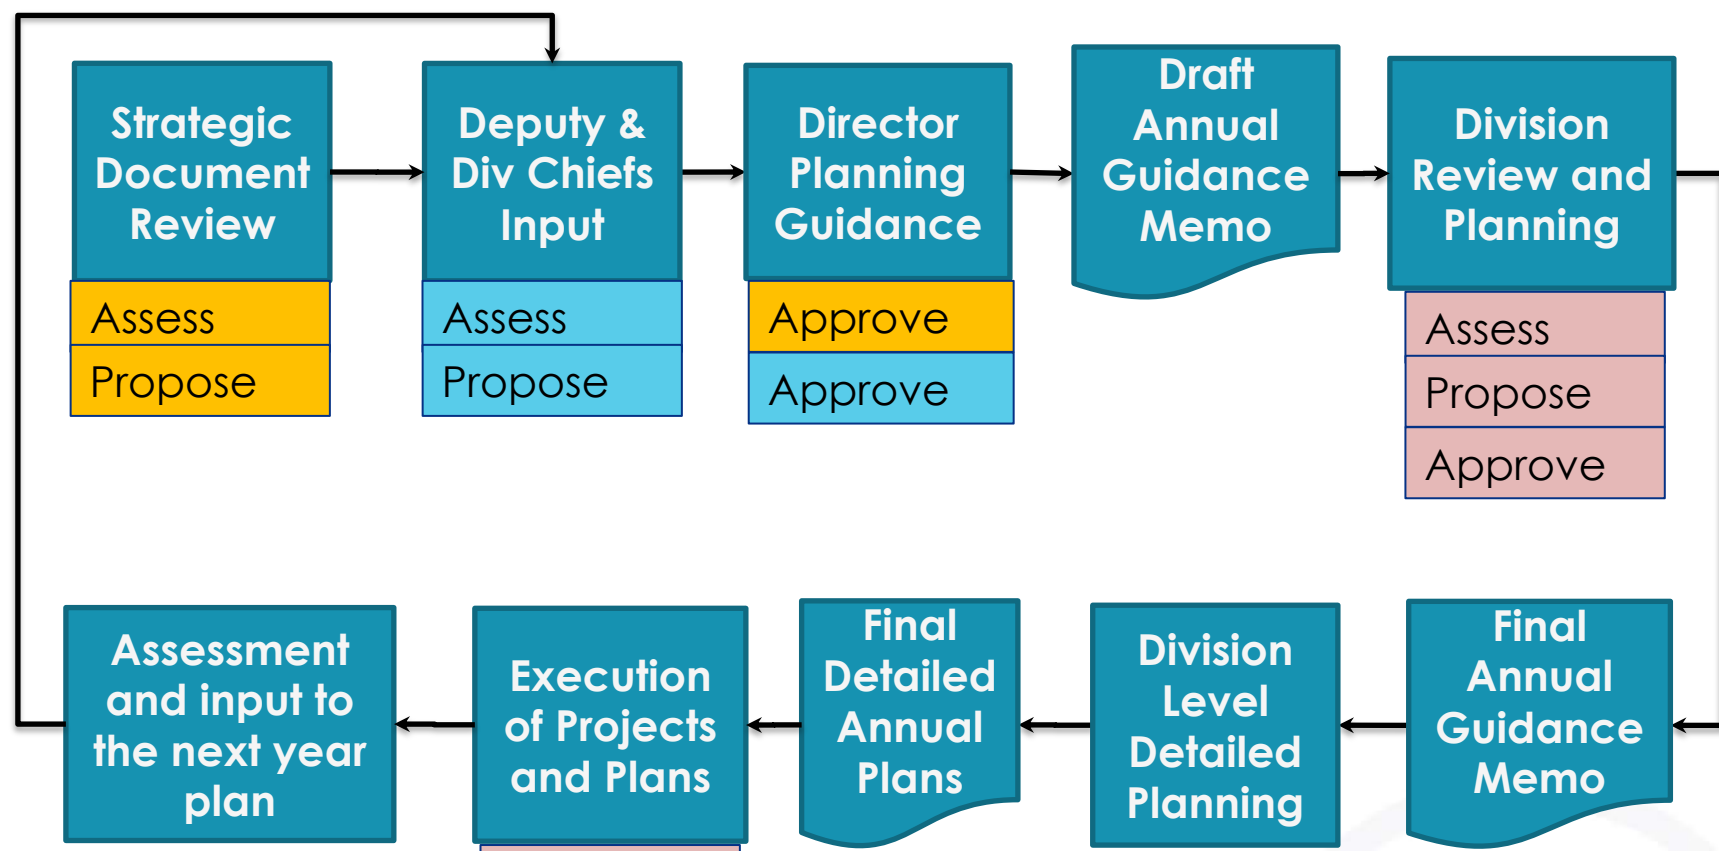

# Requirements Management

Level	Sources	Approval	Addressed in
High	ICOOS Act Congress OMB NOAA/NOS IOOC	Director	Annual Planning Process
Medium	IOOS Strategic Plan Implementation Plans Regional Priorities	Director	Annual Planning Process
Low	IT user requirements  Project plans	Division Chief	Software development  Projects

# Annual Planning Cycle - Requirements Assessment and Integration

Low Level

# IOOS Requirements Management framework

- Creative tension between regional individuality and need for national consistency
  - National level requirements driven by ongoing engagement with the 11 Regional Associations; their input is incorporated through annual planning cycle
- 11 Regions + National Office + IOOC = building a 'System'
  - ~\$6.8M in 'national' funding and ~\$39M in regional funding in FY19-20 and FY21 House mark.
  - 5 Year Cooperative Agreements – annual de-scope process and special award conditions = IOOS Office influence/direction
- For centralized sub-systems, like DMAC, the IOOS office has a leadership role to coordinate requirements toward national consistency.
  - We do this via meetings, listening, practicing, code sprints, compliance checkers, etc.

# Guiding Principles for Requirements Management

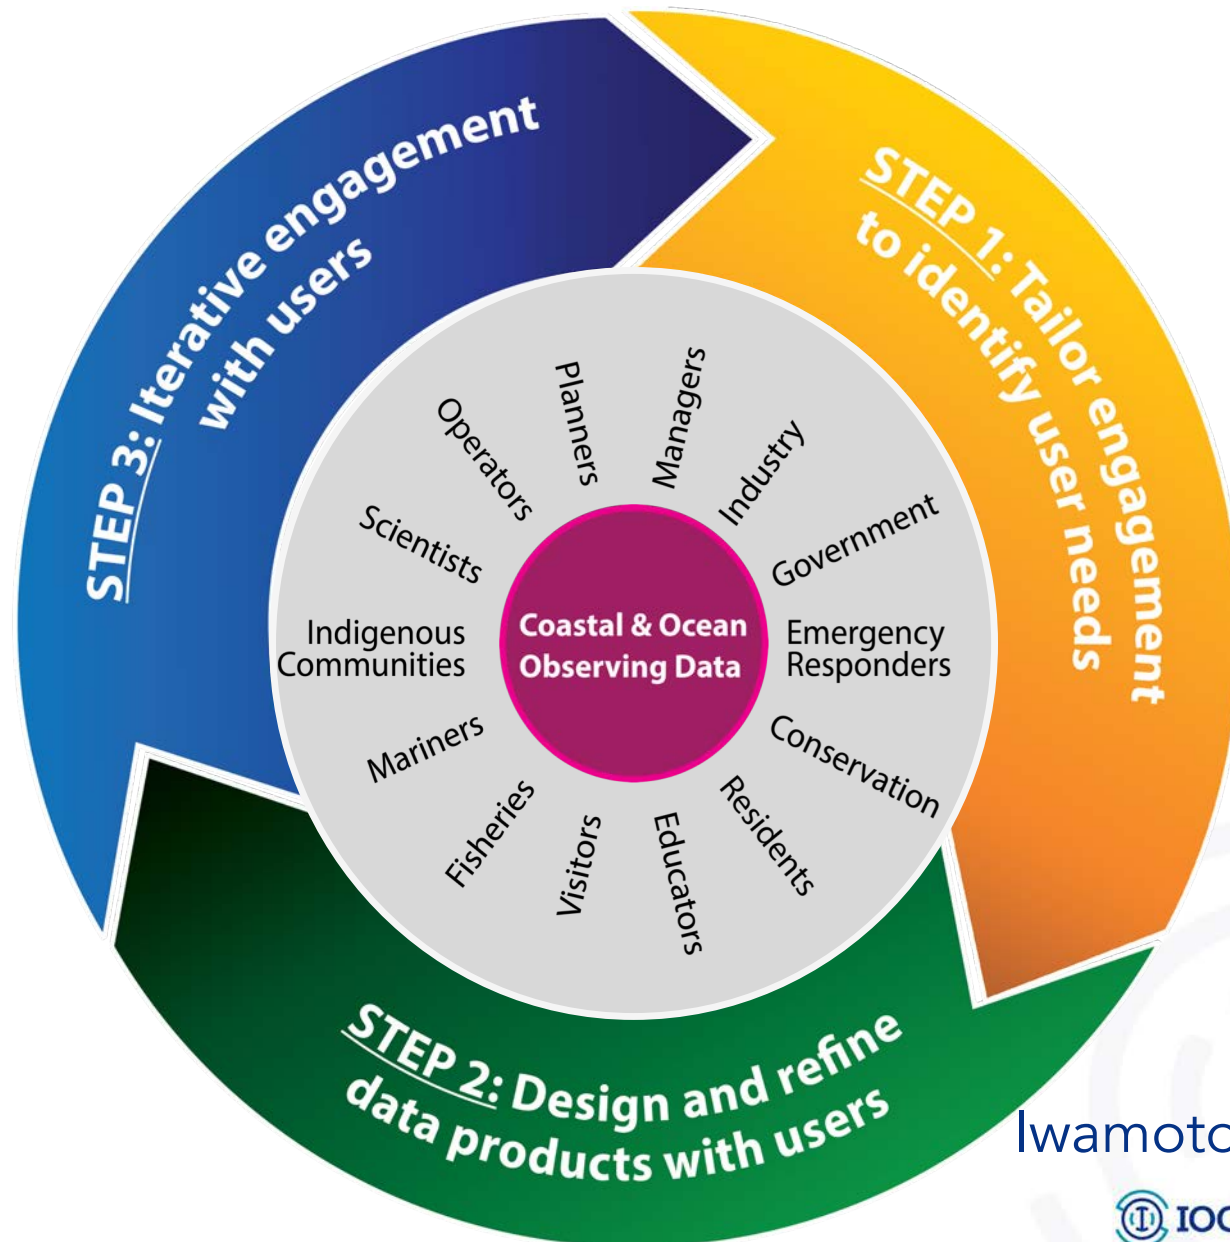

- The following guiding principles are key to successfully managing requirements regionally and nationally:
- Requirements management recognizes Regional Association ability to set regional priorities.
- Requirements management measurably improves decision-making in the IOOS Office.
- Staff (both in National Office and RAs) are able to manage the workload required.
