

BioTrack: Data Management

IOOS DMAC Meeting

June 16, 2021

ATN is: A long-term, multi-agency cooperative network that seeks to provide unity, sustainability and continuity to the U.S. marine animal telemetry community

UNIFIED MARINE LIFE PROGRAM

ATN + MBON: Integrate biological and animal-borne sensor data and data products into our existing ocean observing system capabilities to monitor and assess ecosystem interactions and change

THREE ATN COMPONENTS

- ✓ BUILD ALLIANCES & COLLABORATIONS
- ✓ PROVIDE TELEMETRY DATA MANAGEMENT & DELIVERY
- ✓ SUPPORT BASELINE ANIMAL TELEMETRY OBSERVATIONS

ATN DATA ASSEMBLY CENTER

- Community resource
- Receives data from multiple sources
- Enables/promotes data availability and sharing among global community partners
- Maximizes access to telemetry data
- Enhances and expands electronic tag data products
- Enables permanent archiving at NCEI, DataONE; DOI minting

BIOTRACK

Collaborative, multi-species synthesis project that seeks to assess and monitor hotspots of marine megafauna biodiversity by linking satellite telemetry data with remotely sensed environmental data on multiple EOVs and geographic "seascapes".

- Led by Dr. Neil Hammerschlag & PhD student Chelsea Black, Uni. Miami-RSMAS
- Western North Atlantic, Gulf of Mexico and Caribbean Sea
- So far...26 confirmed collaborators from 17 organizations
- Data from...24 projects, 608 deployments and 23 species
- [BioTrack - IOOS MBON Project Site \(marinebon.org\)](http://marinebon.org)

BIOTRACK DATA CHALLENGES

- Large number of participating PIs/Projects
- Combo of active and historic dataset
- Combo of embargoed/protected and publically-available datasets
- Data from multiple sources and manufacturers
- Data from multiple tag types (R/T Argos, delayed mode, Fastloc GPS)
- Robust metadata requirements (project, deployment, data)
- Community still getting on board with applying recognized standards and use of netCDFs

RESEARCH WORKSPACE

Request more information 

Login 

The Research Workspace is a web-based platform for collaboratively managing science projects through the entire data lifecycle. Whether you are a research scientist, data manager, or program manager you can benefit from using the Research Workspace. Coordinate information transfer, create and execute reproducible numerical workflows, generate metadata and publish finalized data products to national archives all through a single application.

 Satellite Tracking of Migratory Shark Species in the Atlantic, 2010-2021

We are currently using satellite tags **to** track the movements of shark species in the Atlantic **to** study the movement ecology of highly **migratory** ... **sharks to** determine the biophysical drivers, ecosystem impacts and conservation implications of their movements exposed **to** anthropogenic threats, such as ... urbanization, overfishing and climate change. By characterizing and identifying such movement patterns, we can help supply policy makers with data **to**

👤 **Principal Investigator:** Neil Hammerschlag

📍 Add project to map +

 Mesoscale Eddies Release Pelagic Sharks from Thermal Constraints to Foraging in the Ocean Twilight Zone, 2014-2017

to thousands of kilometers. Debate regarding how and why predators use fronts and eddies, for example as a **migratory** cue, enhanced forage ... thank donors **to** the ProjectWHOI crowdfunding campaign: The Secret Lives of **Sharks**. Computational support was provided by the AWS Cloud Credits for Research program ... time series measurements collected by 15 instrumented individuals, we show that blue **sharks** seek out the interiors of anticyclonic eddies where they
